STRATEGIC RESPONSE SYSTEMS

Deep Technical Expertise | Business Outcome Focused

Business Climate

Independent Research conducted among business owners in the U.S. reveals that the top three things keeping them awake at night are matters over which they have little or no control: rising interest rates, healthcare costs, and the health of their regional economy.

Another concern very near the top includes choosing the right technology for the company's needs; keeping on top of upgrades, integrations, staff training and support, and most important, securing company data from cyberattack.

According to a survey by Gartner of 700 business leaders* in the US, identifying the right technologies for their business is one of their top challenges. For 1 in 5, it is their main challenge.

*Businesses with 100 or fewer employees make up 99.7% of all U.S. businesses.

The good news is managing information technology risk is absolutely within your control. Some industries have more risk than others, but all rely on seamless communications and 100% uptime. Since its inception in 2002, SRS has had the opportunity to analyze and meet the challenges faced by each of our clients, understand the intricacies of the specific industry they belong to, and recognize important IT infrastructure trends and opportunities of import to business in general.

As a result, SRS approaches system design from an enterprise perspective, building scalable solutions that allow companies to chart a course to the enterprise level. SRS offers an extensive solutions background to help companies choose the right technologies to secure their company's data and support their unique processes. SRS post-implementation workshops ensure company staff are all properly trained in the proper use of technology.

Enabling faster time to market, implementing solutions that improve processes, increasing worker productivity and avoiding downtime due to inaccurate data or system failure; this is where tangible value is generated and a competitive edge achieved.

Find out how SRS can help you harden your IT security against cybercriminals while increasing IT efficiency across your entire company. Call us at 646-258-0307 or email MeetSRS@strategicresponsesystems.com.

Our Services

Custom Cloud Options	Strategic IT Projects	Technical Support	IT & User Security	Emergency & Business Continuity
SRS provides all options for leveraging Cloud technologies – private, public, hybrid - and/ or server colocation to achieve the level of security, data access and cost savings desired.
